

Choose **PipeBurst Pro™** for peace-of-mind protection from costly water damage.

Protect what matters most.

Description	The PipeBurst Pro is a complete leak detection and flood prevention system. As a whole the system detects leaks using both point detection and flow-based detection. Once a leak has been detected, the WaterValve will close the water line, stopping the water at the source to prevent damage.	
Detection	Wireless and Wired sensors should be placed in likely places for leaks. These sensors will detect the physical presence of water with only 1/16" of water on the floor. Once water has been detected the wireless sensor will alert the VIP to close the WaterValve. The FloMeter detects the amount of water flowing through the water line by the gallon. It will send this information to the VIP, and using preset parameters for home and away settings will detect unusual water usage as another type of leak detection.	
VIP	The VIP coordinates information between our graphical user interface, app.ionleaks.com and the hardware components of the PBP4 system.	
	Wireless Frequency	915MHZ
	Power Supply	5VDC or 15VDC
Actuated Valve	Upon the detection of a leak, PipeBurst Pro's WaterValves close the water line immediately to stop water from flowing, resulting in minimal water damage.	
	Sizes	¾", 1", 1 ¼", 1 ½", 2", 3", Larger Special Order
	Power Supply	12VDC
Relay and Switch Device	The Relay and Switch Device communicates between two devices via dry contact outputs and inputs. This device allows for the communication of open/close signals to the Actuated Valve, the reception of water usage from the FloMeter and the integration of outside security systems.	
	Power Supply	5VDC
app.ionleaks.com	Online interface for the entire system that allows for a user to view all their components present state, history and adjust settings. App.ionleaks.com even allows for a user to open/close their valve from any remote location!	
Repeater	Repeaters expand the wireless coverage for the system from the VIP. Up to 7 Repeaters can be added to the system.	
Remote Control	The Remote Control allows for an individual to toggle between two settings specified in app.ionleaks.com with just the push of a button.
